

Are you 60 or Older?

Be part of research to improve ways to detect changes in memory and thinking

Join our CST Research Study!

The CST (Cognitive Stress Test) Study is recruiting adults 60-years and older to study the normal aging brain and those with early signs of memory loss.

We are looking for English and Spanish speakers with:

- normal memory
- some changes in memory or thinking
- no diagnosis of dementia

Participants will be compensated for their time.

If you are interested in learning more, please contact our Study Coordinator:
